INTEGRATION CENTER

Fully Configure and Integrate Vendor Equipment and Ship Anywhere in the World

- **FASTER DEPLOYMENT:** Foundation provides basic, production-ready cloud delivering business value in a matter of weeks

- **CUSTOMIZED SOLUTIONS:** Configured multi-vendor solutions to meet your exact specifications

- **EXPERT ENGINEERS:** InterVision engineers are certified and trained in all areas critical to IT environments

- **PEACE OF MIND:** InterVision has managed the integration and logistics for thousands of customers

Configuring and testing technology equipment can take away precious time from your IT staff and slow down the implementation of your business initiatives. InterVision can help. Our team of highly trained engineers can fully configure multi-vendor solutions in our Integration Center and ship anywhere in the world. InterVision has the capabilities and expertise to handle all your integration and configuration needs — from routine configuration tasks to the multi-site converged data center deployments.

Located in Santa Clara, California, InterVision's 3,000 sq. ft. state-of-the-art Integration Center is designed to handle a high volume of IT equipment. The Integration Center is a restricted access facility with more than a dozen benches supplied with Gigabit Ethernet, fiber optic cabling, and the latest configuration management tools. Engineers are vendor-trained and certified, and have access to specialized testing tools.

A Focus on Quality, Cycle Time and Delivery

InterVision's integration process begins with the final bill of material and configuration specifications (provided by the customer or drafted by our Professional Services team). Equipment is procured from our vendor partners and delivered directly to InterVision. Once the equipment arrives, our Engineers handle the details of unpacking, configuring and testing. Our Logistics team handles the receiving, warehousing, inventory management, packing, shipping and documentation. InterVision's Project Management Office works closely with the customer to manage all aspects of integration projects and ensures the implementation stays on schedule

Configuration Across IT Infrastructure

InterVision specializes in the configuration of servers, storage, switches, routers, wireless, load balancers, and WAN optimization, and other IT equipment. Our expertise also includes converged architectures from some of the leading vendors. For example, we offer complete FlexPod deployment services including configuration of UCS, NetApp, and VMware/vCenter

Integration/Configuration Services

- Firmware updates and software imaging
- Memory, disk, PCI cards, Host Bus Adapters
- Equipment burn in
- Racking and stacking
- Cable management
- Network, server and SAN/NAS builds
- Testing (System, diagnostic, port, device, etc.)
- Wireless device builds
- RAID/cluster setup

- Staffing available globally

Global Support and Logistics

InterVision has provided support and logistics to more than a1,000 customers with offices outside of the United States. Our Logistics team handles the receiving, warehousing, inventory management, packing, shipping and documentation. We have managed the shipping and logistics for global deployments for wireless, networking, storage and servers.

InterVision understands customers often have critical delivery times, with our extensive experience we are able to assist in every way possible to ensure these times are met. InterVision will prepay VAT and duty

fees in advance, saving customers time in dealing directly with customs. We work hard to find the right solution for each customer.

NEXT STEPS
